### Air quality requirements

Do not operate or store the panel where chemicals evaporate, or where chemicals are present in the air:

- Corrosive chemicals: Acids, alkalines, liquids containing salt.
- Flammable chemicals: Organic solvents.

<b>⚠ CAUTION</b>
<b>INOPERATIVE EQUIPMENT</b>
Do not allow water, liquids, metal, and wiring fragments to enter the panel case.
<b>Failure to follow these instructions can result in injury or equipment damage.</b>

## Structural Specifications

Grounding	Functional grounding: Grounding resistance of $100\Omega$ , $2\text{mm}^2$ (AWG 14) or thicker wire, or your country's applicable standard. (Same for FG and SG terminals)
Cooling Method	Natural air circulation
Structure <sup>*1</sup>	IP65F NEMA #250 TYPE 4X/13 (on the front panel when properly installed in an enclosure)
External Dimensions	W132 x H106 x D42 mm (W5.2 x H4.17 x D1.65 in.)
Panel Cut Dimensions	W118.5 x H92.5 mm (W4.67 x H3.64 in.) <sup>*2</sup> Panel thickness area: 1.6...5 mm (0.06...0.2 in.) <sup>*3</sup>
Weight	0.4 kg (0.9 lb) or less (main unit only)

<sup>\*1</sup> The front face of the GP unit, installed in a solid panel, has been tested using conditions equivalent to the standards shown in the specification. Even though the GP unit's level of resistance is equivalent to these standards, oils that should have no effect on the GP unit can possibly harm the panel. This can occur in areas where either vaporized oils are present, or where low viscosity cutting oils are allowed to adhere to the panel for long periods of time. If the GP unit's front face protection sheet peels off, these conditions can lead to the ingress of oil into the GP unit and separate protection measures are suggested.

Also, if non-approved oils are present, they may cause deformation or corrosion of the front panel's plastic cover. Therefore, prior to installing the GP unit, be sure to confirm the type of conditions that will be present in the GP unit's operating environment. If the installation gasket is used for a long period of time, or if the GP unit and its gasket are removed from the panel, the original level of protection cannot be kept. To maintain the original protection level, be sure to replace the installation gasket regularly.

<sup>\*2</sup> For dimensional tolerance, everything  $+1/-0$  mm ( $+0.04/-0$  in.) and R in angle are below R3 (R0.12 in.)

<sup>\*3</sup> Even if the installation wall thickness is within the recommended range for the "Panel Cut Dimensions", depending on wall's material, size, and installation location of the GP unit and other devices, the installation wall could warp. To prevent warping, the installation surface may need to be strengthened.

The front face of the panel, installed in a solid panel, has been tested using conditions equivalent to the standards shown in the specification.

### CAUTION

#### EQUIPMENT DAMAGE

Ensure that the panel is not in permanent and direct contact with oils.

**Failure to follow these instructions can result in injury or equipment damage.**

## ***NOTICE***

### **STORAGE AND OPERATION OUTSIDE OF SPECIFICATIONS**

- Store the panel in areas where temperatures are within the panel's specifications.
- Do not restrict or block the panel's rear-face ventilation slots.

**Failure to follow these instructions can result in equipment damage.**

## ***NOTICE***

### **GASKET AGING**

- Inspect the gasket periodically as required by your operating environment to keep the initial IP level.
- Change the gasket at least once a year, or as soon as scratches or dirt become visible.

**Failure to follow these instructions can result in equipment damage.**
